Tissue Engineering: From Lab to Clinic

Tissue Engineering: From Lab to Clinic

Tissue engineering is a multidisciplinary field incorporating the principles of biology, chemistry, engineering, and medicine to create biological substitutes of native tissues for scientific research or clinical use. Specific applications of this technology include studies of tissue development and function, investigating drug response, and tissue repair and replacement. This area is rapidly becoming one of the most promising treatment options for patients suffering from tissue failure. This abundantly illustrated and well-structured guide serves as a reference for all clinicians and researchers dealing with tissue engineering issues in their daily practice.
